

# CONTENTS

PREFACE	iv
NOMENCLATURE AND DIMENSIONLESS GROUPS	xiv
1 OVERVIEW	1
1.1 Introduction	1
1.1.1 Organization of the text	3
1.2 Solidification processes	5
1.2.1 Shape casting	5
1.2.2 Continuous and semi-continuous casting	14
1.2.3 Crystal growth processes	18
1.2.4 Welding	20
1.3 References	23
<b>Part I Fundamentals and Macroscale Phenomena</b>	<b>25</b>
2 THERMODYNAMICS	29
2.1 Introduction	29
2.2 Thermodynamics of unary systems	30
2.2.1 Single phase systems	30
2.2.2 Equilibrium of phases	34
2.3 Binary alloys	39
2.3.1 Thermodynamics of a single phase solution	39
2.3.2 Ideal and regular solutions	43
2.3.3 Equilibrium of two phases	47
2.3.4 Multi-component alloys and Gibbs' phase rule	50
2.4 Departure from equilibrium	53
2.4.1 Interfacial equilibrium	53
2.4.2 True departure from equilibrium	54
2.5 Exercises	69
2.6 References	72
3 PHASE DIAGRAMS	73
3.1 Motivation	73
3.2 Binary systems	74

---

3.2.1	Isomorphous systems: preliminary concepts . . . . .	75
3.2.2	Isomorphous systems: construction from Gibbs free energy curves . . . . .	80
3.2.3	Eutectic systems . . . . .	82
3.2.4	Peritectic systems . . . . .	88
3.2.5	Other binary systems . . . . .	91
3.2.6	Calculation of binary alloy phase diagrams . . . . .	93
3.3	Ternary systems . . . . .	95
3.3.1	Ternary isomorphous systems . . . . .	97
3.3.2	Ternary three-phase equilibrium . . . . .	102
3.3.3	Ternary four-phase equilibrium: ternary eutectic . . .	105
3.4	Exercises . . . . .	109
3.5	References . . . . .	111
4	BALANCE EQUATIONS . . . . .	113
4.1	Introduction . . . . .	113
4.1.1	Reference frames and definitions . . . . .	114
4.1.2	Control volumes . . . . .	117
4.2	Mass balance . . . . .	124
4.3	Momentum balance . . . . .	130
4.3.1	Linear elastic solids . . . . .	133
4.3.2	Plastic deformation . . . . .	133
4.3.3	Newtonian fluids . . . . .	138
4.3.4	Average form of the momentum balance . . . . .	138
4.4	Energy balance . . . . .	143
4.5	Solute balance in multicomponent systems . . . . .	149
4.6	Scaling . . . . .	154
4.7	Exercises . . . . .	161
4.8	References . . . . .	163
5	ANALYTICAL SOLUTIONS FOR SOLIDIFICATION . . . . .	165
5.1	Introduction . . . . .	165
5.2	Solidification in a superheated melt . . . . .	165
5.2.1	Pure materials . . . . .	165
5.2.2	Planar front solidification of a binary alloy . . . . .	173
5.2.3	Transient solidification of a binary alloy at constant velocity . . . . .	180
5.3	Solidification in an undercooled melt . . . . .	188
5.3.1	Planar front growth . . . . .	189
5.3.2	Solidification of a paraboloid . . . . .	194
5.4	The effect of curvature . . . . .	200
5.4.1	Solidification of a sphere in an undercooled melt . . .	200
5.5	Exercises . . . . .	205
5.6	References . . . . .	208

<b>6</b>	<b>NUMERICAL METHODS FOR SOLIDIFICATION</b>	<b>209</b>
6.1	Introduction . . . . .	209
6.2	Heat conduction without phase change . . . . .	210
6.2.1	Finite difference method . . . . .	210
6.2.2	Finite volume method . . . . .	218
6.2.3	Finite element method . . . . .	220
6.3	Heat conduction with phase change . . . . .	228
6.3.1	Fixed grid: Enthalpy methods . . . . .	228
6.3.2	Fixed grid: Temperature recovery methods . . . . .	235
6.3.3	Front tracking methods . . . . .	236
6.3.4	Level set methods . . . . .	241
6.4	Fluid flow . . . . .	243
6.4.1	Finite difference method on staggered grids . . . . .	245
6.4.2	Finite element methods for CFD . . . . .	249
6.4.3	Example: Melting of pure Ga . . . . .	251
6.5	Optimization and inverse methods . . . . .	254
6.6	Exercises . . . . .	264
6.7	References . . . . .	267

---

**Part II Microstructure** **269**

<b>7</b>	<b>NUCLEATION</b>	<b>273</b>
7.1	Introduction . . . . .	273
7.2	Homogeneous nucleation . . . . .	273
7.2.1	Embryos and nuclei . . . . .	273
7.2.2	Nucleation rate . . . . .	278
7.3	Heterogeneous nucleation . . . . .	283
7.3.1	Motivation . . . . .	283
7.3.2	Basic theory . . . . .	286
7.3.3	Instantaneous or athermal nucleation . . . . .	293
7.4	Mechanisms for grain refinement . . . . .	301
7.4.1	Inoculation . . . . .	302
7.4.2	Mediated nucleation . . . . .	307
7.5	Exercises . . . . .	313
7.6	References . . . . .	315
<b>8</b>	<b>DENDRITIC GROWTH</b>	<b>317</b>
8.1	Introduction . . . . .	317
8.2	Free growth . . . . .	318
8.2.1	General observations . . . . .	318
8.2.2	Surface energy anisotropy, stiffness and equilibrium shape . . . . .	320
8.2.3	Stability and scale selection for a freely growing sphere of a pure material . . . . .	326
8.2.4	Extension to binary alloys . . . . .	331

8.3	Constrained growth . . . . .	334
8.3.1	General observations . . . . .	334
8.3.2	Length scales and pattern selection in constrained growth . . . . .	338
8.3.3	Stability of planar front growth in binary alloys . . . . .	340
8.4	Growth of a needle crystal . . . . .	347
8.4.1	General observations . . . . .	347
8.4.2	Approximate models for growth of a dendrite tip . . . . .	354
8.4.3	Primary dendrite arm spacing in constrained growth . . . . .	359
8.4.4	Secondary dendrite arm spacing: Coarsening . . . . .	361
8.5	Convection and dendritic growth . . . . .	366
8.5.1	Convection and free growth . . . . .	366
8.5.2	Convection and columnar growth . . . . .	368
8.6	Phase-field methods . . . . .	370
8.7	Exercises . . . . .	378
8.8	References . . . . .	382
<b>9</b>	<b>EUTECTICS, PERITECTICS AND MICROSTRUCTURE SELECTION</b> . . . . .	<b>385</b>
9.1	Introduction . . . . .	385
9.2	Eutectics . . . . .	386
9.2.1	General considerations . . . . .	386
9.2.2	Coupled eutectic growth morphologies . . . . .	389
9.2.3	Jackson-Hunt analysis for regular eutectics . . . . .	393
9.2.4	Operating point and stability of regular eutectic . . . . .	400
9.2.5	Irregular eutectics . . . . .	405
9.2.6	Other eutectic morphologies . . . . .	409
9.3	Peritectics . . . . .	416
9.3.1	General considerations . . . . .	416
9.3.2	Nucleation . . . . .	417
9.3.3	Solidification of peritectics at normal speed . . . . .	419
9.3.4	Solidification of peritectics at low speed . . . . .	423
9.4	Phase selection and coupled zone . . . . .	427
9.4.1	Phase competition . . . . .	427
9.4.2	Coupled zone . . . . .	431
9.5	Exercises . . . . .	437
9.6	References . . . . .	441
<b>10</b>	<b>MICROSEGREGATION AND HOMOGENIZATION</b> . . . . .	<b>445</b>
10.1	Introduction . . . . .	445
10.2	1-D microsegregation models for binary alloys . . . . .	446
10.2.1	Microsegregation with diffusion in the solid state . . . . .	452
10.2.2	Peritectic alloys . . . . .	459
10.2.3	Volume averaged model . . . . .	461
10.3	Homogenization and solution treatment . . . . .	465
10.3.1	Homogenization . . . . .	465
10.3.2	Solution heat treatment . . . . .	468

10.4 Multicomponent alloys . . . . .	472
10.5 Exercises . . . . .	478
10.6 References . . . . .	480
<b>11 MACRO- AND MICROSTRUCTURES</b>	<b>483</b>
11.1 Introduction . . . . .	483
11.2 Equiaxed grains growing in a uniform temperature field . .	485
11.2.1 Nucleation and growth of equiaxed eutectic grains . .	487
11.2.2 Transition from globular to dendritic equiaxed grains	491
11.2.3 Nucleation and growth of equiaxed globular grains .	494
11.2.4 Nucleation and growth of equiaxed dendritic grains .	496
11.3 Grains nucleating and growing in a thermal gradient . . . .	499
11.4 Columnar grains . . . . .	503
11.5 Columnar-to-Equiaxed Transition . . . . .	513
11.5.1 Hunt's criterion . . . . .	513
11.5.2 Microsegregation and cooling curves . . . . .	516
11.6 Micro-macroscopic models . . . . .	518
11.6.1 Thermal conditions . . . . .	518
11.6.2 Analytical models of microstructure formation . . . .	521
11.6.3 Stochastic models of microstructure formation . . . .	522
11.6.4 Influence of convection . . . . .	527
11.7 Exercises . . . . .	534
11.8 References . . . . .	536
<b>Part III Defects</b>	<b>539</b>
<b>12 POROSITY</b>	<b>543</b>
12.1 Introduction . . . . .	543
12.2 Governing equations . . . . .	548
12.3 Interdendritic fluid flow and pressure drop . . . . .	550
12.3.1 Darcy equation . . . . .	550
12.3.2 Niyama criterion . . . . .	552
12.4 Thermodynamics of gases in solution . . . . .	557
12.5 Nucleation and growth of pores . . . . .	563
12.5.1 Pore Nucleation . . . . .	566
12.5.2 The role of curvature during growth . . . . .	568
12.5.3 Contribution of gas diffusion during growth . . . . .	571
12.5.4 Summary of the coupling between pressure and pore fraction . . . . .	572
12.6 Boundary conditions . . . . .	573
12.7 Application of the concepts . . . . .	577
12.8 Exercises . . . . .	583
12.9 References . . . . .	585

---

13 DEFORMATION DURING SOLIDIFICATION AND HOT TEARING	587
13.1 Introduction . . . . .	587
13.2 Thermomechanics of castings . . . . .	589
13.2.1 Origins of thermal stresses . . . . .	589
13.2.2 General formalism for a fully solid material . . . . .	592
13.2.3 Examples . . . . .	593
13.3 Deformation of the mushy zone . . . . .	597
13.3.1 Rheological measurements on semi-solid alloys . . . . .	599
13.3.2 Coherency . . . . .	608
13.3.3 Two-phase approach . . . . .	614
13.4 Hot tearing . . . . .	618
13.4.1 Characteristics of hot tears . . . . .	618
13.4.2 Hot tearing tests and hot tear sensitivity . . . . .	623
13.5 Hot tearing criteria and models . . . . .	626
13.6 Exercises . . . . .	638
13.7 References . . . . .	640
14 MACROSEGREGATION	643
14.1 Introduction . . . . .	643
14.2 Macrosegregation during planar front solidification . . . . .	645
14.2.1 Thermal convection in a pure material . . . . .	645
14.2.2 Convection during directional solidification of a binary alloy . . . . .	647
14.3 Composition field and governing equations . . . . .	652
14.4 Macrosegregation induced by solidification shrinkage . . . . .	655
14.4.1 Initial solidification at the mold surface . . . . .	656
14.4.2 Steady state . . . . .	658
14.4.3 Final transient . . . . .	658
14.5 Macrosegregation induced by fluid flow . . . . .	660
14.5.1 Analysis based on Flemings' criterion . . . . .	660
14.5.2 General approach . . . . .	662
14.5.3 Freckle formation . . . . .	667
14.6 Macrosegregation induced by solid movement . . . . .	673
14.6.1 Macrosegregation induced by grain movement . . . . .	674
14.6.2 Macrosegregation induced by solid deformation . . . . .	677
14.7 Exercises . . . . .	682
14.8 References . . . . .	684
